MOROSINI®
luce & design

AZIENDA

MOROSINI: il nome scaturisce dalla storia di Venezia e si lega a tradizioni passate, a grandi capacità di incontrare il mondo restando sempre solidamente legati alla città lagunare.

Oggi il nome descrive una vivace azienda d'illuminazione, attenta alle evoluzioni del gusto e pronta a sperimentare nuove forme e nuovi linguaggi artistici.

Le scelte di stile di Morosini sono racchiuse nella sempre curata freschezza delle linee e nell'assoluta pulizia formale dei materiali impiegati.

Questi orientamenti trovano gratificazione nell'energia creativa di un gruppo di designer emergenti, particolarmente dediti al dare forza e valore espressivo anche a materiali insoliti, originali, non consueti al mondo dell'illuminazione.

Morosini ricalca la tradizione tecnica veneziana e ne fa elemento distintivo ed irrinunciabile: l'azienda pensa, sperimenta e produce in Italia e in Europa, a testimonianza di un orgoglio e di una sapienza costruttiva ed estetica che sono un valore in più per le lampade prodotte.

Morosini ricerca e persegue comportamenti ecocompatibili in ogni fase del processo produttivo, dalla scelta dei materiali coloranti agli imballi completamente riciclabili.

La cura per la qualità globale del lavoro è un punto d'onore e di ostinazione.

Luce e design sono i confini del territorio creativo di Morosini.

MOROSINI is the name of a noble, illustrious family intrinsically tied to the remarkable history and traditions of the republic of Venice.

It is also the name of a renowned manufacturer of lighting fixtures that pays particular attention to worldwide evolution in style, and research and development of new designs and artistic expressions.

The Morosini range of products stands in a class of its own, the result of premium materials combined with the innovative designs and skills of the company's creative group of designers who are especially dedicated to enhancing the expressive qualities of original materials rarely used in the lighting sector.

Morosini's distinctive feature is its ability in applying traditional Venetian techniques in order to experiment, design and create unique products offering added value in terms of aesthetics and style both in Italy and throughout Europe.

Morosini also pursues an eco-compatible policy in every stage of the production process – from choice of dyes to packaging materials that can be fully re-cycled.

We are proud of the great care we take in order to provide lighting fixtures offering total quality workmanship, supreme creativity and the ultimate in design.

Legenda

Tutte le lampade sono costruite secondo le norme europee EN 60598-1 e con materiali approvati da vari istituti di sicurezza.
All the lamps are made according to European standards EN 60598-1 and of materials approved by various safety institutes.

Apparecchio predisposto per il montaggio su superfici infiammabili.
Fixture ready for mounting on inflammable surfaces.

Apparecchio in classe II - Apparecchio nel quale la protezione contro la scossa elettrica non si basa unicamente sull'isolamento fondamentale, ma anche sulle misure supplementari di sicurezza costituite dal doppio isolamento o dall'isolamento rinforzato. Queste misure non comportano dispositivi per la messa a terra e non dipendono dalle condizioni d'installazione.

Class II appliance - appliance in which protection against electric shock is not only based on basic insulation, but also on additional safety measures, i.e. double insulation or reinforced insulation. These measures do not involve earthing devices and do not depend on the installation conditions.

Risparmio di energia.
Energy saving.

Grado di protezione - Stabilisce un sistema per la classificazione degli apparecchi elettrici in base al grado di protezione fornito dagli involucri degli stessi. I simboli utilizzati per indicare questo grado di protezione sono costituiti dalle lettere "IP" seguite da due cifre caratteristiche:

- la prima cifra indica la protezione contro la penetrazione dei corpi solidi e della polvere;
- la seconda cifra indica la protezione contro la penetrazione dei liquidi.

Protection level - This establishes a classification system for electric appliances based on the protection level supplied by their casing.

The symbols used to indicate the level of protection are the two letters, "IP" followed by two figures.
- The first figure indicates the protection against penetration by solid bodies and dust;
- The second figure indicates the protection against penetration by liquids.

Gradi di protezione IP - Protection degrees (IP)

1ª cifra protezione alla penetrazione di corpi solidi. 2ª cifra protezione contro la penetrazione d'acqua.
1st figure: protection against penetration by solid bodies. 2nd figure: protection against penetration by water.

0 Non Protetto. <i>No protection.</i>	0 Non Protetto. <i>No protection.</i>
1 Protetto da corpi solidi superiori a 50 mm. <i>Protected against solid matters (over 50 mm.).</i>	1 Protetto contro lo stillicidio. <i>Protected proof fixture.</i> 
2 Protetto da corpi solidi superiori a 12 mm. <i>Protected against solid matters (over 12 mm.).</i>	2 Protetto da cadute d'acqua, inclinazione di 15°. <i>Protected against water falling at 15° angle.</i>
3 Protetto da corpi solidi superiori a 2,5 mm. <i>Protected against solid matters (over 2,5 mm.).</i>	3 Protetto contro la pioggia. <i>Rain proof fixture.</i> 
4 Protetto da corpi solidi superiori a 1 mm. <i>Protected against solid matters (over 1 mm.).</i>	4 Protetto contro gli spruzzi. <i>Splash proof fixture.</i> 
5 Protetto contro la polvere. <i>Dust proof.</i> 	5 Protetto contro getti d'acqua. <i>Water jet proof.</i> 
6 Totalmente protetto contro la polvere. <i>Fully dust proof.</i> 	6 Protetto contro le ondate. <i>Wave proof.</i>

Nei nostri apparecchi, cablati secondo le norme relative alla classe I, la protezione contro le folgorazioni si basa, oltre che sull'isolamento del cavo di alimentazione, su una misura di sicurezza supplementare, costituita dal collegamento delle parti metalliche accessibili ad un conduttore di protezione (messa a terra), in modo che tali parti non possano in ogni caso divenire pericolose. Nel caso di apparecchi cablati in classe II, la protezione viene garantita da misure di sicurezza supplementari, costituite da un doppio isolamento delle parti in tensione. Queste misure non comportano l'adozione di dispositivi per la messa a terra.

I nostri apparecchi sono corredati da cavi ad alta resistenza termica e, in ottemperanza alle norme di sicurezza contro lo scoppio delle lampadine alogene lineare, da schermi protettivi in pyrex. Le laccature sono eseguite con polveri epossidiche essicate in forni ad alta temperatura, metodo che garantisce la massima resistenza ad urti ed abrasioni. Per facilitare le normali operazioni di pulizia dei vetri, consigliamo acqua tiepida. Fermo restando le caratteristiche basilari del prodotto, Morosini si riserva di apportare modifiche in ogni momento al solo scopo di miglioramento. I colori riprodotti nel presente catalogo possono, a causa della riproduzione su carta, differire dall'originale.

Our lighting fixtures are wired according to Class I specifications. Additional safety precaution against electric shocks are provided besides the insulation of the incoming feeder. All touchable metal components are connected to the grounding. Fixtures wired according to Class II are provided with double insulation, without grounding.

High thermic resistance wires are used and halogen bulbs are fitted with glass protector.

Epoxidic powders lacquering to guarantee perfect scratch resistance. For easier cleaning of glass diffusers some lukewarm water is recommended. While maintaining the basic characteristics of the product, Morosini reserves the right to make modifications at any time with the sole aim of improvement. Due to the reproduction on paper, the colours contained in this catalogue may be slightly different to the original colour tones.

Nos appareils ont le câblage selon les caractéristiques de la classe I. Outre l'isolation du câble il y a des systèmes de sûreté additionnels. Tous les composants sont connectés à la mise à terre.

Les appareils avec câblage selon la classe II ont une double isolation sans la mise à terre. Les appareils adoptent des câbles à haute résistance thermique, ampoules halogènes et écrans protectifs en pyrex. Les laquages sont faites en poudre époxy au but de garantir la parfaite résistance à coups et abrasion. Nous conseillons le nettoyage des verres avec de l'eau tiède.

Tout en respectant les caractéristiques de base du produit, Morosini se réserve le droit d'apporter des modifications en tous les moments rien que pour l'amélioration. Les couleurs indiquées au présent catalogue peuvent, à cause de la reproduction sur papier, différer de l'original.

Unsere Leuchten entsprechen der Klasse I. Zusätzlicher Schutz gegen Stromschlag kommt durch Isolierung des Kabels. Alle zugaengliche Metallteile sind mit der Erde verbunden. Die Leuchten die der Klasse II entsprechen, haben eine doppelte Isolierung, ohne Erde. Es werden hitzbestaendige Kabel montiert und die Halogenbirnen haben Schutzglas in Pyrex. Der Lack ist aus epoxydischem Pulver und schuetzt gegen Stoss und kratzer.

Die Glaeser mit lauwarmen Wasser. Unter Beibehaltung der wesentlichen Produktcharakteristiken behaelt sich die Morosini jederzeit Aenderungen zur Verbesserung der Produkte vor.

Die im Katalog wiedergegebenen Farben koennen aufgrund der Abbildung auf Papier vom Original abweichen.

En nuestros productos, cableados según las normas referentes a la clase I, la protección contra los rayos se basa, además de sobre el aislamiento del cable de alimentación, en una medida de seguridad suplementaria, constituida por la unión de las partes metálicas accesibles a un conductor de protección (con toma a tierra), de modo que dichas partes no puedan en ningún caso resultar peligrosas. En el caso de productos cableados en clase II, la protección se garantiza por medidas de seguridad suplementarias, constituidas por un doble aislamiento de las partes en tensión. Estas medidas no incluyen la adición de dispositivos para la toma a tierra. Nuestros aparatos van equipados con cables de alta resistencia térmica y, siguiendo las normas de seguridad para la explosión e las bombillas halógenas lineales, van también equipados con pantallas protectoras in pyrex.

El proceso de lacado incluye el secado de los polvos epoxidicos en hornos de alta temperatura, método que garantiza la máxima resistencia a los golpes y a las quemaduras.

Para facilitar las operaciones de limpieza normales del cristal, se aconseja el uso de agua templada.

Manteniendo las características base del producto, Morosini se reserva el derecho de realizar pequeños cambios con el fin de mejorar la calidad del producto. Los colores indicados en el presente catálogo pueden ser distintos del original a causa de la reproducción sobre papel.
